The screenshot shows the Visual Studio Code interface. The Explorer sidebar on the left displays the file structure, with the 'Downloads' folder selected. Inside 'Downloads', the file 'socket_multicast_sender.py' is highlighted. The main editor area shows the contents of this file, which is a Python script for creating a multicast socket and sending a message. The code is as follows:

```
1 import socket
2 import struct
3 import sys
4
5 message = b'Hello!'
6 multicast_group = ('224.3.29.71', 10000)
7
8 # Create the datagram socket
9 sock = socket.socket(socket.AF_INET, socket.SOCK_DGRAM)
```

6. Получение измененного сообщения

The screenshot shows the Visual Studio Code interface with a file named `socket_multicast_sender.py` open. The code in the editor is as follows:

```
1 import socket
2 import struct
3 import sys
4
5 message = b'Hello!'
6 multicast_group = ('224.3.29.71', 10000)
7
8 # Create the datagram socket
```

The interface also shows a list of files in the Explorer on the left, including `socket_multicast_re...` and `socket_multicast_se...`. At the bottom, the TERMINAL panel displays the output of the script's execution:
